Manual Overview

This manual is a supplementary document that summarises the points that will be renewed after upgrading AVIC-X1R by using CNDV-60M.

For customers using AVIC-X1R

The operations other than those described in this manual are basically the same as those at the time you purchased the hardware. Use the Operation Manual and the Hardware Manual included in the hardware package as your primary reference.

For customers using AVIC-X1

By upgrading AVIC-X1 with this disc, many changes will take place including the menu configuration change. For the operations other than those described in this manual, obtain the Operation Manual for AVIC-X1R and use it as your primary reference.

❒ If you have already upgraded your AVIC-X1 by using CNDV-50MT, you do not need to obtain the Operation Manual for AVIC-X1R. Use the Operation Manual supplied with CNDV-50MT.

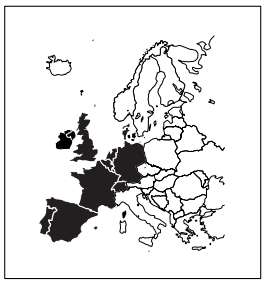
Double Disc

This package is adopted “Double disc” system so as to contain larger database and expanded coverage area: one for the west and the other for the east.
However, the map data over 200m scale is contained both disc and there is a large overlapping area (Germany, Switzeland, Denmark and part of Austria) so that you can get comfortable operation at the long-distance navigation.

Configuration of data stored on discs

The database and lower scale maps stored on each disc are as follows:



West area disc

East area disc

In case of the cross disc routing

Only when setting your destination for the another disc, it is necessary to replace from the current disc to another disc.
In case of the cross disc routing, the following procedure is recommended.

1 Insert the disc containing the destination you want to set.

2 Search for the destination and set as your destination.

3 After route calculation finished, remove the current disc.

4 Insert the disc containing your current location.

- ❒ The navigation system reboot automatically with keeping your destination and route set.
- ❒ To play DVD-video or CD, remove the DVD Map Disc after the “Memory navi indicator” stops flashing.

5 Drive toward your destination.

- ❒ When you approach the areas not stored on the disc, the navigation system notify you of approaching that area. Replace the disc at that time.

❒ Removing the disc and inserting another disc causes the navigation system to automatically restart and reload the new route. (This automatic “Reroute” operation cannot be cancelled.)

Limitation of Functions for Areas not Stored on the Disc

For areas not stored on the disc, the functions will operate as follows:

Displaying the map

- Maps with a scale of between 25 m and 200 m cannot be displayed. (If the scale was set to between 25 m and 200 m, it is automatically switched to 500 m.)
- When driving with **Mixed Mode**, **St.List Mode** or **Driver's View**, upon entering an area not stored on the disc the display automatically switches to **Map Mode**. (When the vehicle reenters an area stored on the disc, the display returns to the previous map mode except for **Driver's View**.)

Destination search

- You cannot search a destination in an area not stored on the disc using **Address Search** or **Postal Code Search** (including operation by voice recognition).
- In case of **POI Search** and **Vicinity Search**, only "**City Center**" search is possible.
- If you cannot search in a currently selected country, the system may forcibly switch to the country selection screen.
- A **Motorway Search** covers all areas, regardless of the disc on which the information is stored.
- If a **Vicinity Search** is performed on the border of an area not stored on the disc, the system will not necessarily select the nearest facility. (The search will take place only within the range of areas stored on the disc.)

Guidance

- When your vehicle approaches an area not stored on the disc, you will be notified three times: when the distance to the area not stored on the disc is 20 km (12 mi), 10 km (6 mi) and 5 km (3 mi) respectively. When your vehicle enters that area, a caution is given.
- In the areas not stored on the disc, only guidance for reaching the destination is provided. No other guidance is given.
- If a route calculation is operated within an areas not stored on the disc, the route might not be set from the streets you are currently driving. Also, if you set the destination in an area not stored on the disc of the disc, the system may not be able to set the route up to the destination.
- If the vehicle deviates from the set route in an area not stored on the disc, the Auto Reroute function will not work.
- Even if "**Close-up of Junction**" is "**On**", the display will not switch to an enlarged map of the junction.
- Even if you drive on the motorway, lane information, motorway exit numbers and motorway signs will not be displayed.

Route information

- If the set route goes through an area not stored on the disc, no route profile for that area will be displayed. (If the set route traverses both an area not stored on the disc and area stored on the disc, only the route profile within the area stored on the disc will be displayed.)
- Route scrolling for an area not stored on the disc is possible only with a map scale of 500 m or above.

Other function limitations

Overlay POI

- Only display "**City Center**" is available in an area not stored on the disc.

Memory mode

- Only data for areas stored on the disc can be memorised. (Data for areas not stored on the disc cannot be memorised.)
- Preparation for memory navi mode will have to be repeated if the vehicle enters an area not stored on the disc, then returns to an area stored in the disc. (Preparation for the memory navi mode starts from the location where the vehicle re-entered the area stored on the disc.)

Avoid area

- An area not stored on the disc cannot be set as an **Areas to Avoid**.

❒ A set **Areas to Avoid** may be deleted when the software is updated. If this happens, the system will automatically try to recover the deleted information, but data can be recovered only for areas stored on the disc. For items that could not be recovered, a recovery process will begin when you set another disc.

Recovery process for memory navi and avoid area

The memorised area may be deleted in the following circumstances:

- Yellow lead of the navigation system or the vehicle battery is disconnected.
- The **RESET** button is pressed.
- Software is updated.

❒ In these circumstances, the system will automatically try to recover the deleted information, but data can be recovered only for areas stored on the disc. For items that could not be recovered, a recovery process will begin when you set another disc.

Light grey touch key

The function is not available during memory navi mode. Or, the function is not available for areas not stored on the disc.
Touching this button activates a message indicating that the function is not available.
In memory navi mode and/or when traversing an area not stored on the disc, selection of the scales is limited.
